Netflix Analysis Report

1. Project Overview

This project provides a comprehensive analytical evaluation of Netflix's content ecosystem, leveraging a dataset of 8,807 titles. The primary objective is to decode customer consumption behavior and identify key production trends. By analyzing variables such as content types, geographic distribution, release years, and audience ratings, this study uncovers actionable insights into Netflix's global content strategy. The findings are intended to assist in data-driven decision-making regarding future content acquisitions, regional investment priorities, and strategic scheduling to maximize subscriber engagement and platform growth.

2. Dataset Summary

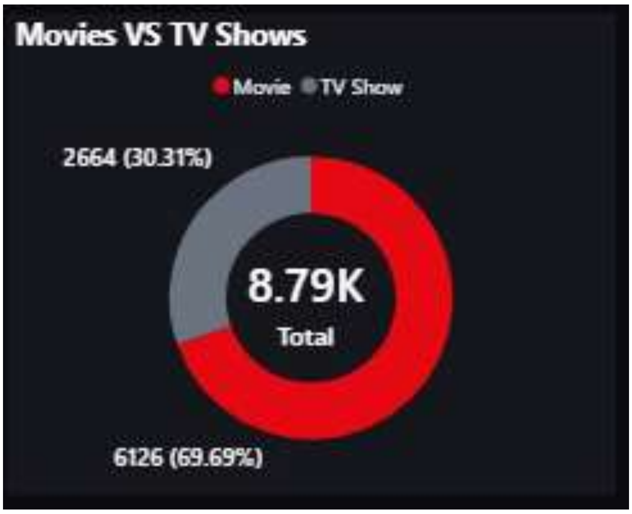
This section outlines the structure and quality of the dataset used for our analysis.

- **Total Rows:** 8,807
- **Total Columns:** 12
- **Key Features:** type, director, country, release_year, rating, duration, and listed_in.
- **Data Integrity & Preprocessing:**
    - The dataset contained significant missing values in critical fields, specifically in director (2,634), country (831), and cast (825).
    - To ensure analytical accuracy, missing categorical values were imputed with the label 'Unknown'.
    - Rows missing essential transactional metadata, such as date_added, rating, or duration, were removed to maintain the integrity of our growth trend analysis.

3. Exploratory Data Analysis (EDA)

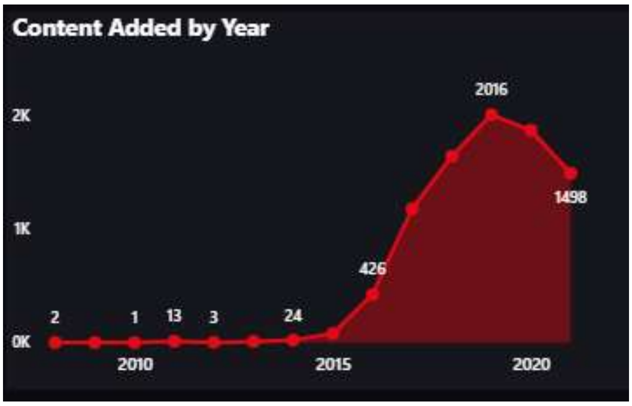
In this phase, we performed in-depth data exploration to identify core trends in Netflix's content library using Python. Our analysis focused on understanding content types and the historical trajectory of content additions.

- **Content Type Distribution:**
    - Our analysis confirms that the Netflix library is heavily skewed towards movies.
    - Movies constitute approximately 69.69% of the total library, while TV Shows account for the remaining 30.31%.



Content Growth Trends:

- The platform witnessed exponential growth in content additions starting in 2015.
- Content release frequency peaked significantly between 2016 and 2019 before experiencing a natural stabilization.
- This trend highlights Netflix's aggressive global content acquisition and expansion strategy during this period.



4. SQL Insights (Business Transactions)

We utilized structured SQL queries in PostgreSQL to derive key operational metrics and business intelligence from the dataset.

Production Hubs:

- Our analysis of global content origins reveals that the United States is the largest content contributor, accounting for 2,809 titles.
- India follows as the second-largest content contributor, providing 972 titles, confirming its importance as a high-growth market.

	country text	total_content bigint
1	United States	2809
2	India	972
3	Unknown	829
4	United Kingdo...	418
5	Japan	243
6	South Korea	199
7	Canada	181
8	Spain	145
9	France	124
10	Mexico	110

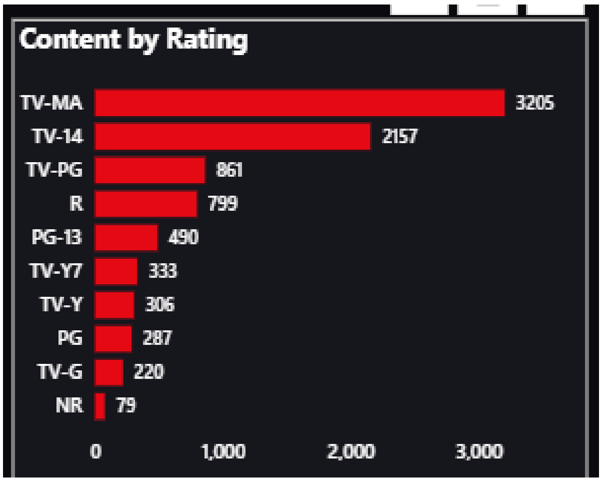
Key Creative Partners (Top 10 Directors):

- We identified the directors who contribute the highest volume of content to the platform.
- Directors such as Rajiv Chilaka (19 titles) and Raul Campos (18 titles) lead the platform's production volume, emphasizing the importance of long-term creative collaborations.

	director text	total_titles bigint
1	Rajiv Chilaka	19
2	Raúl Campos, Jan Su...	18
3	Suhas Kadav	16
4	Marcus Raboy	16
5	Jay Karas	14
6	Cathy Garcia-Molina	13
7	Youssef Chahine	12
8	Martin Scorsese	12
9	Jay Chapman	12
10	Steven Spielberg	11

Content Rating Patterns:

- The platform's strategy is clearly oriented toward mature audiences, as the most dominant rating category is **TV-MA** (3,205 titles).
- This is followed by the **TV-14** rating (2,157 titles), suggesting a heavy focus on young adult and mature demographic segments.



5. Dashboard & Business Recommendations

- **Dashboard Summary:**
  - Our interactive dashboard provides an aggregated view of Netflix's performance metrics.
  - It effectively visualizes the critical 2019 release peak, the high density of mature-rated content, and the strong concentration of production in major markets like the US and India.

Strategic Business Recommendations:

- **Prioritize Targeted Content Acquisition:** Leverage the high engagement and production metrics observed in the US and India to prioritize future original content titles within these high-growth regions.
- **Sustain Maturity-Based Programming:** Continue the strong investment pipeline in TV-MA rated content, as this category remains the primary driver of engagement across the subscriber base.
- **Optimize Release Cycles:** Utilize data-driven insights from our content growth trends to schedule high-budget premieres during off-peak periods, ensuring sustained platform visibility and subscriber engagement throughout the fiscal year.
